

With all due respect... FCC-- WHAT ARE YOU THINKING (or NOT THINKING)??

This is to register my strongest possible opposition to the INSANE CONCEPT of the adoption of BPL. Various experiments have already demonstrated the susceptibility of safety, public service, aeronautical, marine, and amateur radio services to disastrous interference. Why has the FCC disregarded the results of tests in other countries, where the concept has been rightly discarded? The concept of "adaptive interference-mitigation techniques" is unenforceable; There is not NOW-- nor ever will there be enough manpower to handle the overwhelming complaints that will be generated. SHAME on all of you who would ignore factually based warnings of what WILL occur should BPL be "rammed through" for what ever faulty reasons you may have! The use of power lines guarantees that much of the HF spectrum will be literally unuseable. There are so many alternative technologies out there, extant or under development, that make BPL an undesirable dinosaur, that one must question the FCC's motive for advancing it to the status of a Docket. Please put your thinking caps back on, and think this through, seeing through the eyes of the people who really know what will be destroyed and what will be in jeopardy! Trust in the Government to make Sound decisions on behalf of the people, not on behalf of commerce!!!!!!!!!!
